

GET FLOWING AT FULL CAPACITY

OPTIMIZE UPTIME AT YOUR BEVERAGE FACILITY

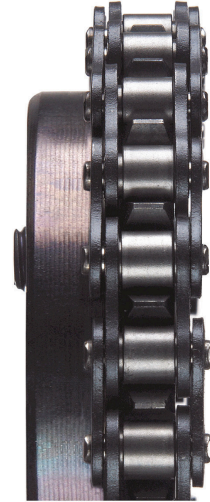

TOUGH PRODUCTS MAKE LIFE EASY

We know many costly maintenance hours are spent at beverage plants maintaining roller chain drives when those efforts could be focused elsewhere. We also know we have a better option. Gates Poly Chain® GT® Carbon™ belt is part of a powerful synchronous drive system that outperforms roller chain in the toughest beverage manufacturing conditions.

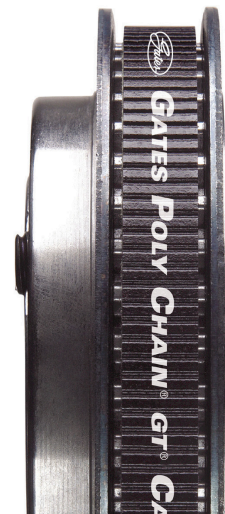

- Lasts three times longer than roller chain
- No stretch, no lubrication and no metal-on-metal parts wear
- Ideal for washdown applications as it resists moisture, chemicals and abrasion
- Less maintenance means less downtime

CONVERT **ONE** ROLLER CHAIN TO GATES POLY CHAIN AND SAVE OVER **ONE** THOUSAND DOLLARS IN THE FIRST YEAR AND OVER TEN THOUSAND DOLLARS IN THE FIRST THREE YEARS.

LEARN MORE AT [GATES.COM/BEVERAGE](https://www.gates.com/beverage) OR CONTACT YOUR GATES DISTRIBUTOR.

Roller chain drives can become messy with required lubrication and are prone to rust and wear, resulting in additional maintenance.

Gates Poly Chain® drives require no lubrication or maintenance, extending performance life.

IMAGINE ELIMINATING DOWNTIME WITHIN YOUR OPERATION

The success of your operation relies heavily on your conveyor and filling equipment running fluidly, without interruption. Until downtime halts this success.

The runaway costs and liabilities that equipment breakdowns exert on your production processes and product integrity are something you want to avoid. Fortunately, you can.

Gates has the products, technology and support to help eliminate potential setbacks.

KEEP YOUR BEVERAGE OPERATION FLOWING STRONG

REDUCE DOWNTIME

Downtime hurts your business with every tick of the clock. In fact, downtime due to maintenance and replacement can cost up to \$200 per minute, or \$24,000 annually for a typical drive. There's a better way to achieve your highest production goals and objectives. We call it optimizing uptime.

It's where you want to be and we have the experience and know-how to help you get there. We do it with some of the most durable belts and hoses—specifically designed to meet your needs.

LIMIT LIABILITY FROM CONTAMINATION

Wet conditions combined with dirty and greasy surfaces. Bacteria-prone clamps attach hoses to end terminations. Washdowns can spread a mess like this all over the plant, increasing the risk of product contamination. We've seen it all. You can reduce contamination risks, with Gates' line of rust-free stainless steel/nickel-plated sprockets and couplings.

Furthermore, Gates carries a line of belts and hoses that meet FDA and USDA regulations, while also providing additional benefits for your facility. You'll see that working with Gates saves you more than money. Gates products help maintain the value of your brand and meet your needs.

STRETCH OUT MAINTENANCE SCHEDULES

How many times is your operation halted by equipment breakdowns in a given year? What does work stoppage cost you each month? What do you spend on resources maintaining faulty or inferior equipment? We've seen it add up to a tidy sum.

You can reduce these expenditures by calling on Gates for reliable products that require less-frequent replacement, such as our Poly Chain® GT® Carbon™ belt. Bring maintenance under control and watch production efficiency take off.

LET US HELP YOUR PROFITS TO FLOW

Gates helps solve numerous efficiency and downtime issues—saving you money in the process. We address the day-to-day challenges common to beverage facilities, such as belt wear and failure. With our vast line of belts, such as Gates Power Curve® belt, you can rest assured that your production lines are running efficiently.

At Gates, we provide the answers you need now—plus strategies for what's coming down the line. We get you back in the flow of running the most efficient operation possible.
