## **BUSHINGS: TAPERS AND HARDWARE**

The QD bushing uses a standard 3/4" per foot taper while the Taper Lock (TL) uses a standard 4° per side (8° total) taper. These tapers are consistent throughout the world.

The hardware (QD bolts and TL set screws) are English thread and dimensions in the U.S. and this is also said to be very common in much of Europe. However, in Europe and elsewhere you may also find metric or British Standard hardware.

Metric and English bores are available most everywhere in the world.
