SUPER HC® MOLDED NOTCH V-BELTS

When your power transmission application needs a high horsepower solution but is constrained by drive weight or physical space, the answer is Super HC® Molded Notch Belts. Our proprietary construction process provides a superior combination of flex and load-carrying capacity, transmitting up to three times the horsepower versus comparably sized belts. Super HC MN V-belts put more power where high speeds, high speed ratios or small pulley diameters are required, offering significant benefits over classical section V-belts. Developed through specialized research, Super HC MN is highly recommended for use on all industrial heavy-duty, narrow section V-belt drives. With increased transmission efficiency this belt allows for a more compact and highly economical drive design.

HOSE SHELF LIFE

Storage environment, along with rubber materials, can vary the shelf life limit. Shelf life is difficult to quantify as many variables affect the hose. Proper storage precautions can result in three to five years of shelf life. Beyond this time, there can be a significant service life decrease, depending on storage environment variables.

Some variables include: Hose should be stored in a cool, dry area never exceeding +100°F (+38°C). If stored below freezing, pre-warming may be required prior to handling, testing and placing into service. Store hose in original container. Never stack hose too high, as its weight can crush hose at the bottom of the stack. Gates recommends hose in extended storage be visually inspected and tested prior to use. Hose judged marginal should be replaced to avoid potential failure, property damage or bodily injury. Store hose on a first-in/first-out basis. Unusually long storage or poor storage environment can deteriorate hose, reduce performance and may lead to premature failure.

MOLDED COOLANT HOSE

Our molded coolant hoses are manufactured to fit upper, lower, bypass, heater and other coolant applications with OEM-quality specifications, saving you time, costs, and energy from going to your OE dealer for radiator hose replacements. Gates' curved hose line is the most comprehensive line on the replacement market.

SUBMERSIBLE FUEL LINE HOSE

If your in-tank applications and fuel systems cause your hoses to be in constant contact with gasoline or other fuel fluids, you need the Gates Submersible Fuel Hose. Gates Submersible Fuel Line Hose is capable of handling multiple types of gasoline and fuels, including gasoline, alcohol-extended gasoline, ethanols, biodiesel or diesel fuel in fully-immersed, mobile and stationary applications. Engineered for fully submersible use, these hoses are excellent for use on gas tank fuel pumps.

POWERCLEAN™ FLUSH TOOL

Using clean water and compressed air, the PowerClean Flush Tool "water hammers" accumulated sludge and scale deposits without the use of harsh chemicals or solvents. It cleans radiators, heat exchangers, hoses and engine blocks more effectively than conventional flushes, maintains system integrity and ensures warranty coverage on replacement parts, including water pumps.

- The Gates PowerClean Flush Tool patented process uses fixed dimensional control of the air and liquid flow paths.
- The process allows air to pressurize the cleaning fluid to scrub deep into corners and crevices, eliminating trapped debris.
- While the "pulse" is intensified with some limited backpressure, the pressure is immediately regulated to a safe level if a hard blockage exists eliminating the possibility of heater core damage from excessive system pressure.
- Water line backflow preventer.
- Large rubber tip for radiator necks and direct flushing of the engine block.
- Small rubber tip on whip hose for direct access to heater core tube stubs.
- 5/8" And 3/4" heater hose barbs for flushing heater cores or engine blocks.
- Part No. 91002*.

POLARSEAL® II PLIERS

PolarSeal II Pliers are used to crimp clamps on PolarSeal II couplings. Any one of three pliers will get the job done. Each tool is designed with slightly different features.

Ratcheting Plier – Part No. 77953

- The ratcheting plier features a no-release function. Once a crimp is started the plier does not release until the crimp is complete. This guarantees a proper seal, with no guess work in the crimp.

Straight Jaw Plier – Part No. 77952

- The straight jaw plier is a low cost, no-frills plier. This plier works best when there are no obstructions to hinder gripping the clamp or completing the crimp.

Notched Jaw Plier – Part No. 77951

- The notched jaw plier is designed for the hard-to-reach places. If obstructions prohibit the use of straight jaw pliers this is the tool to use. Use either side or the front of this plier to make the crimp.

Showing Nominal Belt Top Widths and Outside Lengths with Our Corresponding Belt Numbers

Both Truflex® and Powerated® belts are listed for your convenience. Standard series Truflex® V-Belts are available in four different sizes: the “0000” series, “1000” series, “2000” series and “3000” series V-Belts. The second and third digits in a standard series belt number indicates the outside circumference of the belt, in inches and the fourth digit indicates additional tenths of an inch of belt length, if any.

IMPORTANT: The top width shown is the width obtained by placing a steel tape across the top of the belt. The outside length is determined by placing a steel tape around the outside of the belt. These methods have been used because they are the ones most commonly used by Dealers and Jobbers when measuring a belt.

Showing Micro-V® Belts With Corresponding Top Widths, Nominal Lengths and Number of Ribs

Industrial Micro-V® Belts are identified by a three-part symbol consisting of:

1. Standard Length Designation
2. Cross Section
3. Number of Ribs

For example, the belt designation **780L12** represents:

- (1.) 78.0" in Length
- (2.) L Cross Section
- (3.) 12 Ribs Wide

780 **L** **12**

 Standard Length Designation Cross Section Number of Ribs

NOTE: Rib combinations noted are RMA standard configurations. Belts available in most multiples.

All FleetRunner Heavy-Duty V-Belts are Notched

Showing Belt Numbers with Corresponding Nominal Outside Lengths and Top Widths

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Nominal Belt Top Widths and Outside Lengths with Our Corresponding Belt Numbers

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Belt Numbers with Corresponding Nominal Outside Lengths and Top Widths

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Nominal Belt Top Widths and Outside Lengths with Our Corresponding Belt Numbers

IMPORTANT: Lengths shown (O.C. is Outside Circumference) are obtained by measuring around the outside of the belt. These lengths will not agree exactly with the size significant belt numbering system which is based on the effective length of the belt. Effective length ("engineered" length) cannot be measured in the field because special tools are required.

Automotive Top Widths are the standard sizes defined by the automotive belt industry (SAE J636). Due to manufacturing processes that create "Vertical Flats", the top width of XL and Truck/Bus series V-Belts will not agree with the printed top width dimensions. Top width on this page and on the belt sleeve refers to the pulley groove width and not the actual top width of these belts. A picture of a V-Belt with "Vertical Flats" is shown below. Actual top width of like belt sizes will also vary slightly depending on the manufacturer and belt style.

Showing Hi-Power® II Belts with Corresponding Top Widths and Nominal Outside Lengths

PLEASE NOTE: V-Belt drives which use the belt as a clutch requires special consideration because the heat generated by belt slip (during engagement and disengagement) on some clutching applications can cause the V-Belt tensile materials in the belts listed below to shrink in length. The shrinkage may cause a belt, which is already engaged and driving, to not de-clutch, or a de-clutched belt may engage itself and start driving the machine unexpectedly. Depending on the machine and circumstances, either situation could prove dangerous to the machine operator or bystanders.

Belts especially designed to minimize or eliminate heat shrinkage may be required.

IMPORTANT: The outside length is determined by placing a steel tape around the outside of the belt. This method should be used because it is the one most commonly used by Dealers and Jobbers when measuring a belt.

Key to Size Numbering System

The part number is constructed by placing the number of strands required followed by a slash in front of the size.

In the example above **2** is the number of strands, **A48** is the belt size.
